

GNT200 Airflow Orientation

For proper operation of the GNT200 series power supply, keeping the following components below the applicable temperatures indicates cooling is sufficient:

- Q1: 90°C maximum
- T4: 110°C maximum

Airflow can be in any direction which achieves the component temperature goals. Optimum airflow direction is below:

A. Optimum airflow direction is from the top.

B. Airflow into output end is equally effective:
