#### **DERATING CURVE**

#### CMD vs Output Curve

VCI vs OVP Curve

To ensure the power supply output voltage and current could be accurately adjusted, please make sure to adjust the output voltage and current > 10% vs. the rated voltage and current. (e.g. for a 24 V unit, please adjust the DC output voltage above 2.4 V to ensure accuracy; same applies to the output current)

#### **DERATING CURVE**

#### Power OK Signal & Auxiliary Power Setting

The grounding of "AUX" power and P.OK signal should be connected to "GND" port. If "VO-" is connected as Grounding, make sure to short the GND and VO- ports.

Open drain signal low when PSU turns on. Max. P.OK sink current: 20 mA, Max, drain voltage: 40 V.
